Continuation of 11. does NOT place the application in condition for allowance because: The applicants state the Office has relied only on Mattick and Chan et al., in support of the rejection under 35 U.S.C. 112, first paragraph for lack of enablement. However, the rejection weighs all eight factors enumerated in In re Wands in reaching the conclusion that undue experimentation would be required to use the claimed subject matter. The applicants state that Mattick proves nothing because it is silent on whether connectrons are present. Mattick shows that the prior are cannot be relied upon to provide enablement, and therefore enablement of the claimed subject matter must derive entirely from the instant specification. The applicants state that Chan et al. provides no data of its own and is therefore hearsay, however Chan et al. reviews the prior art, with 128 cited references and is a summation of what is known in the prior art of triplex DNA. Chan et al. shows that identical sequences do not form triple helix structures, as suggested by the instant specification. Because the prior art does not shows connectrons, and shows that the proposed structures of connectrons cannot form, and the instant specification provides no evidence that connectrons exist as triple helix structures or play a role in regulation of gene expression, the rejection is maintained.
